Status and stopping point:
1. For Digital recognition dataset the algorithm is tested for training and testing datasets.
2. For Amazon dataset, the algorithm is tested for training and testing datasets.

Easy and Challenging parts:
1. I could easily find the appropriate library for Machine learning in Data Analytics in Python.
2. Due to the data handling performed in first assignment the analysis part was smooth with concentrating more on the algorithm.
3. Understanding of the dataset increased which helped in performing thorough analysis.
